(a) Nonzero interacting residue
Dimer: analytic
1 bath site: exact resolvent
3 bath sites: exact resolvent
5 bath sites: exact resolvent
Double-pole coefficient $Z_\ell m_\ell$
U (hopping $V = 0.5$)
(b) Suppressed charge fluctuations
$P_1 = n_d - 2D$
1 bath site
3 bath sites
5 bath sites
U
(c) Two-sided square-root splitting
$U = 4$
$U = 8$
$(\omega_+ - \omega_-)^2/10^{-4}$
$(\gamma^2 - \Delta^2)/10^{-4}$
(d) Pole exchange, $U = 8$
Branch 1
Branch 2
EP
$10^3 \mathrm{Im}\,\omega$
$10^3 \mathrm{Re}(\omega - \omega_{\mathrm{EP}})$
